Address for correspondence: kos@@kazusa.or.jp For the latest information on annotation of this clone, please see http://www.kazusa.or.jp/kaos/cgi-bin/agd graph.cgi?c=MQMI Genes with similarity to proteins in the databases are described in 'product' or 'note' qualifiers. Genes that have no significant protein similarity are described as 'unknown protein'. The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/Grail-1.3/),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1656
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1596

                                                                                                                                                                                                                             Submitted (21-NOV-2002) Balzergue S., UMRGV, INRA/CNRS, 2 rue
Gaston Cremieux, 91057 Evry cedex, FRANCE
PCR was performed on DNA from transformants of Arabidopsis thaliana
plants from INRA (Versailles). The DNA fragment(s) resulting from
the PCR were directly sequenced from the left or the right border
to determine the genomic sequence flanking the insertion. T-DNA
derived sequences were removed. Information to order the
corresponding mutant line and a link to a database providing a
graphical display of the insertion site are available at
http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
been generated in the framework of the French plant genomics
program 'Genoplante' (http://www.genoplante.com and
http://genoplante-info.infoblogen.fr).

On Oct 11, 2002 this sequence version replaced gi:21909375.
On Oct 11, 2002 this sequence version replaced gi:21909375.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas in the feature table contig scaffold). Within each contig-scaffold, assembly (a 'contig-scaffold'). Within each contig-scaffold, assembly (a 'contig-scaffold') within each contig-scaffold in the sequence by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rat Genome Sequencing Consortium.

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequencing vector: plasmid; n/a; 100% of reads Chemistry: Dye-terminator Big Dye; 1100% of reads Assembly program: Phrap; version 0.990319

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AC140364

* NOTE: This is a 'working draft' sequence. It currently
* consists of 58 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon
                                                                                                                                                                                                                                                                                                                                  241

                                                                                                                                                                     The present sequence represents the genomic sequence of the Arabidopsis thaliana SGS3 gene. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. & essential fatty acids or proteins, or is pharmaceutically active, e.g.
                                                                                                                                                                                                                                                                                                                                           Claim 1; Page 31-32; 36pp; French.
                                                                                                                                                                                                                                                                                                                                                                                           New SGS3 gene from Arabidopsis thaliana, useful for increasing virus resistance in plants and, when inhibited, for increasing transgene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 15-MAY-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PCR primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                    pCR primers AAF25371-72 were used to amplify cDNA encoding an Arabidopsis thaliana SGS3 polypeptide. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous (e.g. impart resistance (to herbicide, insects or pathogens), alter may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13-JUL-2000; 2000WO-FR002052
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            25-JAN-2001.

 PCR primers AAF25371-72 were used to amplify cDNA encoding an Arabidopsis thaliana SGS3 polypeptide. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased viruses. While inactivation of SGS3 in transgenic plants resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous (e.g. impart resistance (to herbicide, insects or pathogens), alter may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (AVET )

CC cells. The method uses fluorescence-labeled nucleic acids isciacular CC the FF cells and a substrate of expressed sequence tags (RST). The ESTs CC are used in the methods for monitoring differential expression of genes CC in a first filamentous fungal (FF) cell relative to expression of the CC same genes in one or more second filamentous fungal cells. Monitoring the CC global expression of genes from FF cells allows the production potential CC of the microorganisms to be improved. New genes may be discovered, CC possible functions of unknown open reading frames can be identified and CC gene copy number variation and stability can be monitored. The expression CC of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, CC metabolic or catabolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of credundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF11248 to AAF11247 represents ESTs from Fusarium venenatum; AAF11248 to AAF11853 represents CC Aspergillus orgzae; and AAF14879 to AAF1337 represents ESTs from Trichoderma reesei, which are all specifically claimed in the present

             The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA81453 to AAA82414 represent specifically claimed Neisseria meningitidis genomic DNA sequences; AAA81180 to AAA81303 and AAB25620 to AAB25663 represent Neisseria DNA sequences and their corresponding proteins; AAA81254 to AAA81259 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for detecting the presence of polymorphisms associated with inflammatory bowel diseases such as ulcerative colitis and Crohn's disease. The methods can be used to detect the presence of genetic polymorphisms associated with inflammatory bowel disease and correlating their occurrence with disease states. They may be used in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a gene containing a polymorphic site described in the exemplification of the

                                                                                                                                                                                  The invention relates to genes and their expression profiles are used for: (a) screening modulators of precursor stem cell differentiation into conteoblasts, or bone tissue deposition; (b) diagnosing abnormal constepoprosis; or (c) treating or monitoring treatment of the conditions conteoblast formation or cited in (b), or monitoring the progression of bone tissue deposition, cited in (b), or monitoring the progression of bone tissue deposition. CC specific conditions include postmenopausal osteoporosis, glucocorticoid constepoprosis or male osteoporosis, osteopenia, osteopory, drugtinduced abnormalities in bone formation or bone loss, conditions that consider abnormalities in bone formation or bone loss, conditions that consider abnormalities in bone formation or bone loss, conditions that consider abnormalities of the printle osteoporosis). CC involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis). CC sequence date for this patent did not form part of an osteoblast confideration associated CDNA marker of the invention. Note: The confideration, but was obtained in electronic format directly from WIPO cat first the printled sequences as the printled confideration, but was obtained in electronic format directly from WIPO at first properties.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes the full length genome of Neisseria CC meningitidis B (NMB). The sequences in AAF21544 and AAF21607 to AAF21613 CC represent fragments of the NMB genomic sequence, as the sequence was too CC long to go in a record on its own it was split into 8 sequences which CC overlap each other at the beginning and end of each sequence by 49980 bp CC (i.e. the last 49980 bp of AAF21544 is repeated at the beginning of CC AAF21607, the last 49980 bp of AAF21547 are repeated at the beginning of CC AAF21607, and so on). AAF21545 to AAF21588 encode the Neisseria proteins CC given in AAB58550 to AAB58533, and AAF21589 to AAF21606 represent PCR CC primers which are used in the exemplification of the present invention. CC be used in vaccines and gene therapy. Neisseria nucleic acids, proteins CC and/or antibodies which binds to the proteins can be used in compositions CC diagnostic reagent for detecting the presence of Neisserial bacteria or as a CC diagnostic reagent for detecting the presence of Neisserial bacteria or as a CC computer storage medium or computer databases can be used in a search to computer storage medium or computer databases can be used in a search to computer storage medium or computer databases can be used in the NMB computer storage medium or computer databases can be used in a search to computer storage medium or computer databases can be used in a search to compute storage medium or computer databases can be used in a search to compute storage medium or computer databases can be used in a search to compute storage medium or computer databases can be used in a search to compute storage medium or computer databases can be used in a search to compute storage medium or computer databases can be used in a search to compute storage medium or computer databases can be used in a search to compute storage medium or computer databases can be used in a search to compute storage medium or computer databases can be used in a search to compute storage medium or computer databases can be us
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The present invention describes isolated polynucleotides and proteins cencoding and representing the enzymes cinnamate 4-hydroxylase (C4H), CC commarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase (C0M), cinnamyl alcohol dehydrogenase (CND), Cinnamyl acohol dehydrogenase (CND), cinnamyl-COA reductase (CCC), phenylalanine ammonia-lyase (PAL), 4-coumarate:COA ligase (4CL), CC coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), CC cacid methyl transferase, caffeoyl COA methyl transferase, caffeic cacid methyl transferase, caffeoyl COA methyl transferase, coumerate COA (CC ligase, cytochrome p450 LXX1A, diphenol oxidase, flavanol glucosyl cransferase, flavanol hydroxylase, and isoflavone reductase, which are convolved in the lignin biosynthetic pathway. The polynucleotides can be composed to modulating lignin content, lignin composition and the structure cof a plant, especially eucalyptus and pine species, and for modifying the cactivity of an enzyme involved in lignin biosynthetic pathway, and for corpoducing a plant having altered lignin content, composition and content. The lignin content can be efficiently modified using the colynucleotides. AAA67908 to AAA68201 and AAB16341 to AAB16449 represent composition of the polynucleotide and protein sequences used in the exemplification of the corposition and protein sequences used in the exemplification of the corposition of the corposition and protein sequences used in the exemplification of the corposition.

The polynucleotides, polypeptides and genetic constructs are useful for modulating lignin content, composition and structure of plants, or for producing a plant having altered lignin content, composition and structure. The polynucleotides are also useful in genome mapping, physical mapping, positional cloning of genes, or as non-disruptive tags for marking organisms, particularly plants. The present sequence represents a polynucleotide associated with the lignin biosynthetic pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotide associated with the lignin biosynthetic pathway, for modulating lignin content, composition and structure of plants, or producing a plant with altered lignin content, composition and structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2003-829606/77.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bloksberg LN, Havukkala
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (BLOK/)

human immune/hematopoietic diagnosing and/or treating cancers polypeptides, and metastasis.

Claim 1; SEQ ID NO 9306; 3071pp + Sequence Listing; English.

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAW82170 to AAW91921. (I) have cytostatic cactivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to prevent the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK4703 CC to AAK87694 represent human immune/haematopoietic antigen genomic the present invention. AAK54942 to antigen genomic AAK54950 and AAM82169

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SXS
                                                                                                                      This sequence represents a fragment of the CCR enzyme coding sequence. It CC is an example of a DNA sequence of the invention, which are from CR Eucalyptus grandis (eucalyptus) and Pinus radiata (pine) associated with the lignin biosynthesis pathway. Constructs containing the DNA sequences can be used to produce transgenic plants or plant cells, especially woody plants e.g. eucalyptus or pine species but also e.g. monocotyledons or CC plants e.g. eucalyptus or pine species but also e.g. monocotyledons or CC dicotyledons; by stably incorporating the constructs into the plant CC genome. The lignin content or structure, or activity of a specific enzyme in the plant, can therefore be modulated. Reductions in lignin content or CC changes in composition are useful in tree processing for paper. High lignin content results in energy- and chemical-intensive separation methods in order to obtain the pure cellulose fibre required. Reductions in lignin content may also be useful for forage crops, whilst increases CC in lignin composition may be desirable to increase the mechanical strength of wood, change its colour or increase its resistance to rot.

The sequences are also useful as probes to isolate DNA sequences encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                            This sequence represents a cinnamoyl-CoA reductase (CCR) partial cDNA CC from Eucalyptus grandis. This enzyme is involved in the biosynthesis of CC lignin, an insoluble polymer which is primarily responsible for the CC rigidity of plant stems. Lignin serves as a matrix around the CC polysaccharide components of some plant cell walls. The higher the lignin CC content, the more rigid the plant. Lignin also plays a role in disease CC resistance of plants by impeding the penetration and propagation of CC pathogenic agents. Lignin is formed by polymerisation of at least three CC pathogenic agents. Lignin is formed by polymerisation of at least three CC pathogenic agents compared three monolignols are synthesised by similar CC sinapyl alcohol. These three monolignols are synthesised by similar CC pathways from phenylalanine in a multistep process and are believed to be CC plants can be altered using DNA sequences encoding these enzymes. CC Lignin content can be increased by incorporation of additional copies of genes encoding these enzymes into the target plant. This could be beneficial for increasing the mechanical strength of wood. Similarly, a decrease in lignin content can be obtained by transforming the target plant with antisense copies of such genes. This may be beneficial in CCC plants used as forage crops for livestock (lignin is indigestible) and in trees used in paper manufacture

An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998).cDNA cleaved with BamHI
and Khol was ligated to modified Lambda FLC-1 vector (Carninci et
al., submitted for publication) digested with BamHI and SalI. This
clone is in a modified pBluescript vector. Please visit our web
site (http://www.gsc.riken.go.jp/e/plant/index _e.html) for further
